

Garden and Remote Sprayers:

HOSE END GARDEN SPRAYERS:

When (A) is connected to a garden hose and (B) is connected to the top of the container full of product, the water passing through the opening inside the sprayer creates suction and the product inside the container is expelled with the water. Hose End Garden Sprayers are available with a variety of orifice types including foaming, fan, shower spray or a combination.

REMOTE SPRAYERS: Manually Actuated

Similar to the traditional hand-sprayers, Remote Sprayers are available in many brands with different actuation amounts, a variety of orifices and sprayer types. Several tube lengths are available. There are also adapters sized to your container for a complete Remote Sprayer solution. These sprayers are ideal for short use and a multitude of projects.

POWERED SPRAYERS: Effortless Actuation

Powered Sprayers are small, battery powered tools that replace traditional manual pump sprayers. Available in both regular and remote styles, these push-button operated sprayers are ideal for prolonged use as they reduce finger and hand fatigue. Some models are even rechargeable.
